PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(57) Abstract :

A machine-learning-based predictive maintenance system for monitoring motor-bearing systems, detecting faults, and estimating remaining useful life (RUL) is disclosed. The system integrates an ESP32-based data acquisition unit with an ADXL345 tri-axial accelerometer, DS18B20 temperature sensor, and Hall-effect sensor for acquiring vibration, temperature, and rotational-speed measurements from a physical motor-rig. Acquired signals are processed through window segmentation and time-domain and spectral feature extraction. An Isolation Forest model is employed for anomaly detection, while XGBoost models are used for bearing fault classification and RUL prediction using CWRU bearing and NASA C-MAPSS FD001 datasets, respectively. The system further performs physical motor-rig classification using a 32-feature representation for Normal, Imbalance, and Misalignment conditions. A Streamlit dashboard presents processed machine-learning results, historical physical-rig analysis, and live raw telemetry, providing an integrated framework for motor-bearing condition monitoring, fault diagnosis, and prognostic assessment.
